

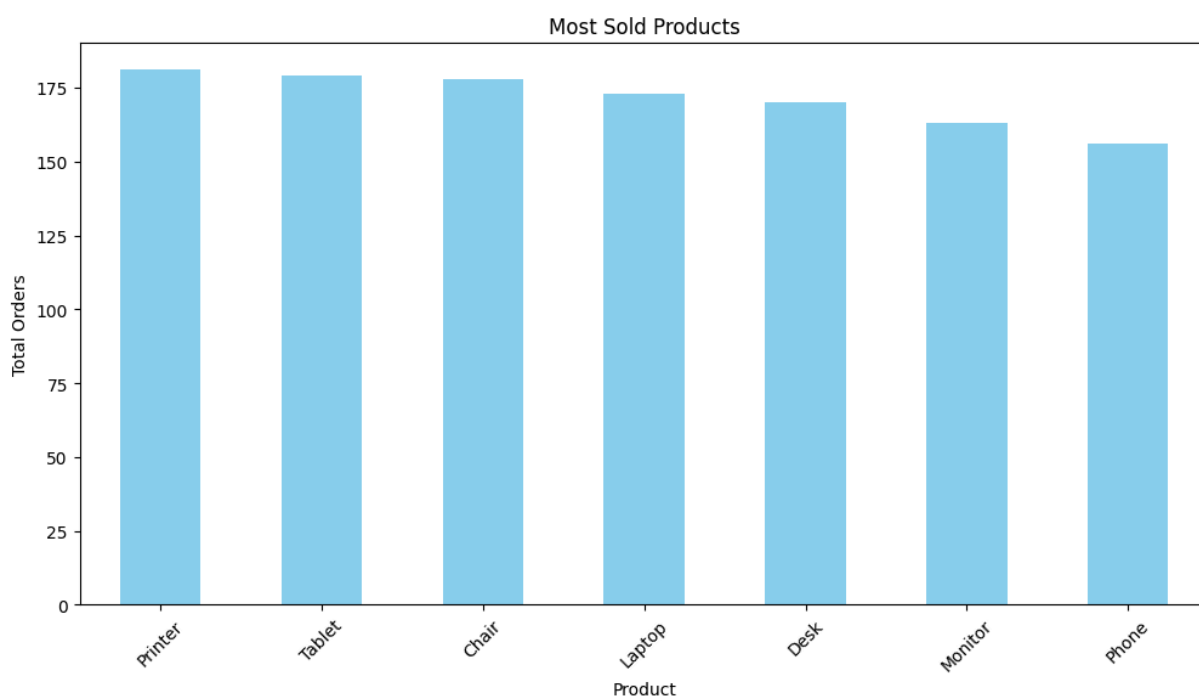

Chart 1: Most Sold Products

```
In [12]: import pandas as pd
df = pd.read_excel('data.xlsx')
```

```
In [13]: import matplotlib.pyplot as plt
plt.figure(figsize=(12,6))
df['Product'].value_counts().plot(kind='bar', color='skyblue')
plt.title('Most Sold Products')
plt.xlabel('Product')
plt.ylabel('Total Orders')
plt.xticks(rotation=45)
plt.show()
```

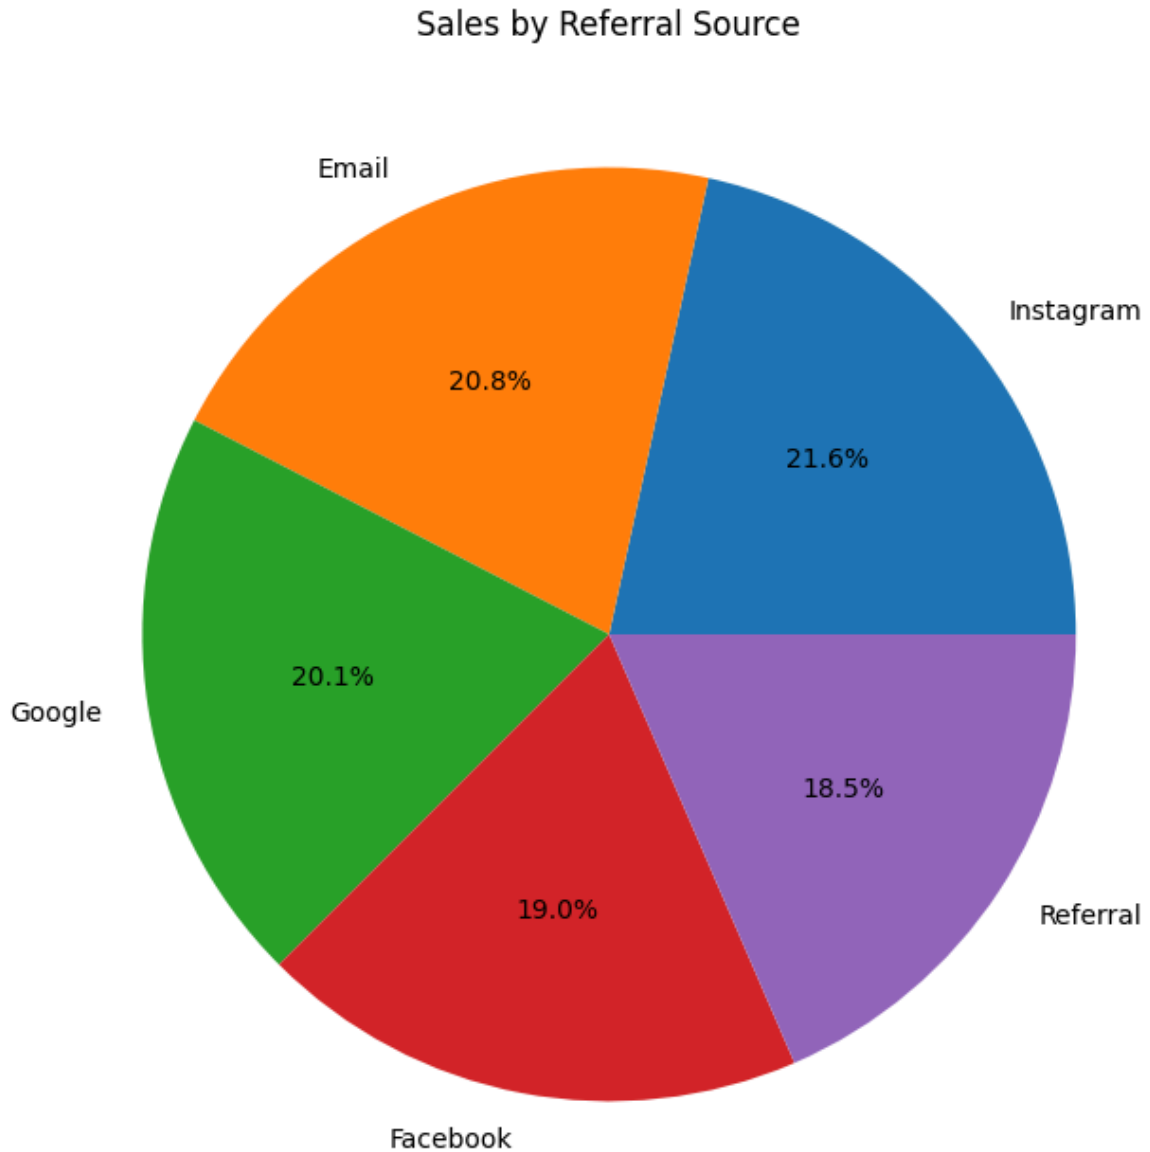

Insight 1: Most Sold Products

Tablet and Chair are the most ordered products with ~275 orders each. The Phone is the least sold at ~260 orders. This suggests we should maintain higher inventory for Tablets and Chairs.

Chart 2: Sales by Referral Source

```
In [14]: plt.figure(figsize=(8,8))
df['ReferralSource'].value_counts().plot(kind='pie', autopct='%1.1f%%')
plt.title('Sales by Referral Source')
plt.ylabel('') # ye line title ke neeche 0 hatane ke liye
plt.show()
```

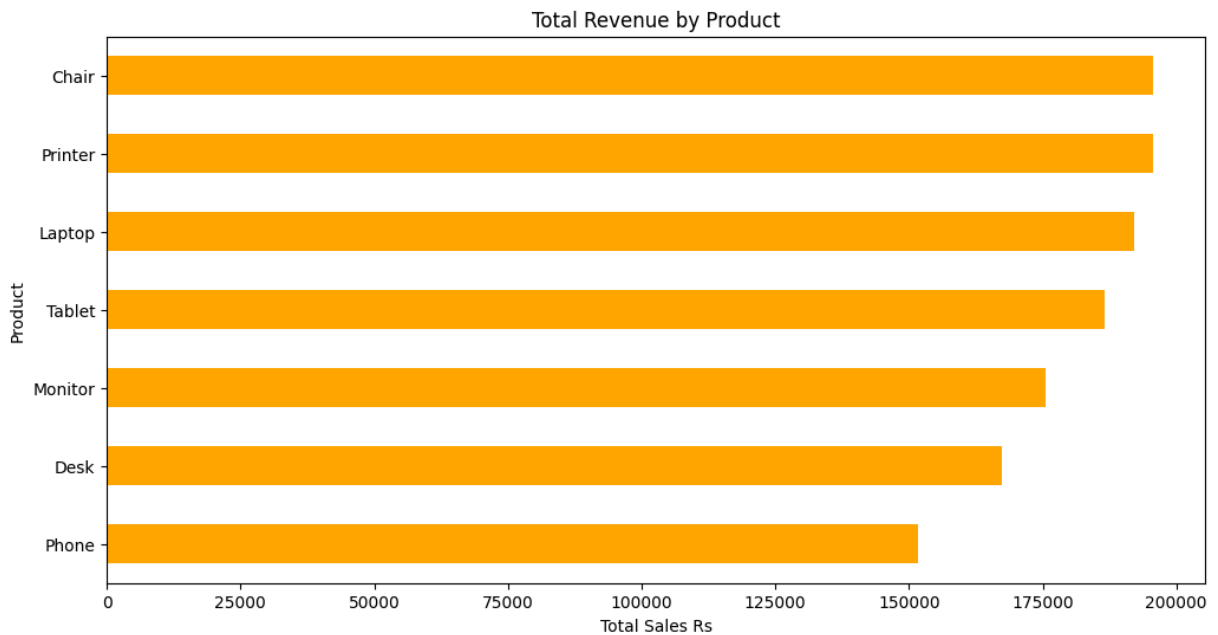

Insight 2: Sales by Referral Source

Instagram is the top referral source at 21.8%, followed by Email at 20.9% and Google at 20.1%. Facebook and Referral are the lowest. The marketing budget should be focused more on Instagram and Email campaigns.

Chart 3: Total revenue by Products

```
In [15]: plt.figure(figsize=(12,6))
df.groupby('Product')['TotalPrice'].sum().sort_values().plot(kind='barh', color='or')
plt.title('Total Revenue by Product')
plt.xlabel('Total Sales Rs')
plt.ylabel('Product')
plt.show()
```

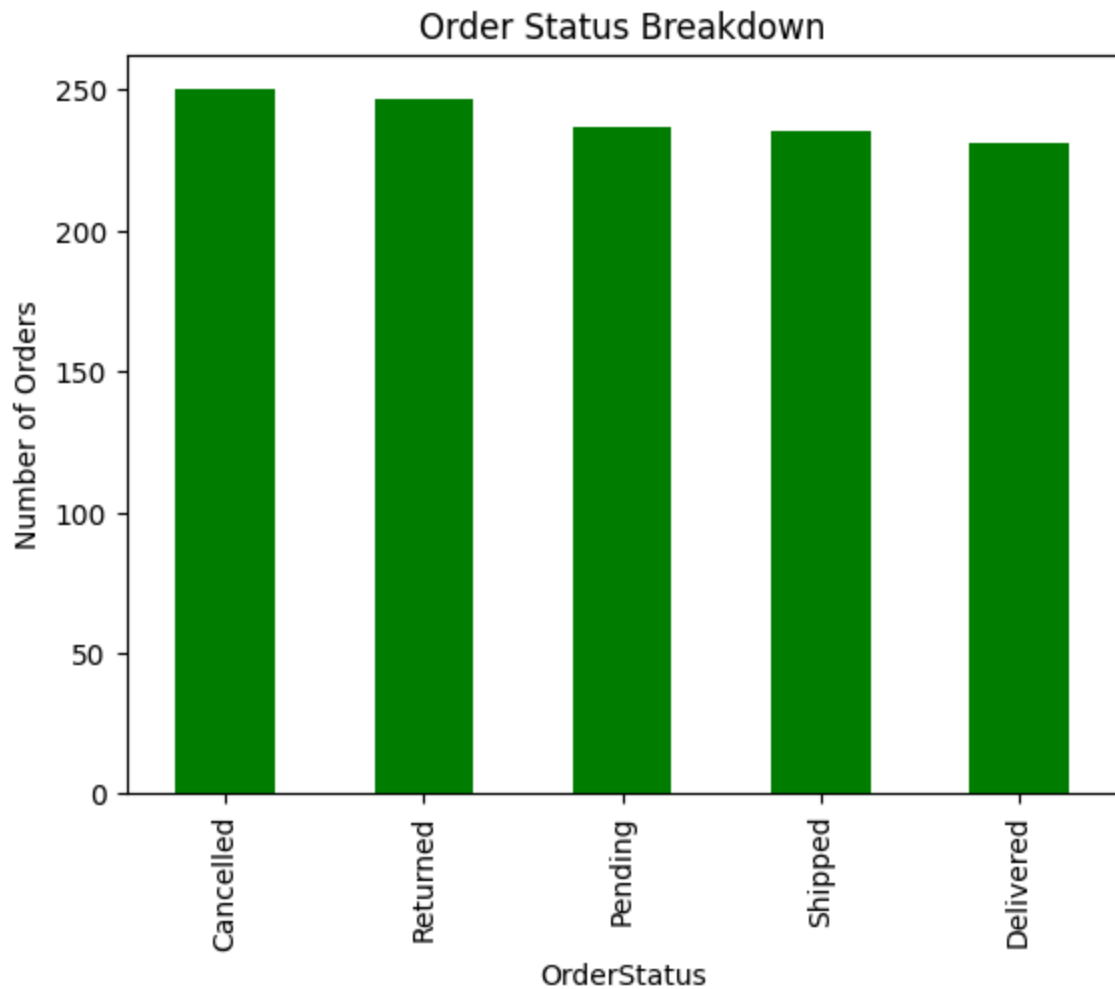

Insight 3: Total Revenue by Product

The Chair generates the highest total revenue at ~180K Rs, while the Phone generates the lowest at ~150K Rs. Even though the Phone sells fewer units, the revenue gap is small, which indicates that the Phone has a higher Unit Price.

Chart 4: Order status Breakdown

```
In [16]: df['OrderStatus'].value_counts().plot(kind='bar', color='green')
plt.title('Order Status Breakdown')
plt.ylabel('Number of Orders')
plt.show()
```

Insight 4: Order Status Breakdown [Most Important]

A critical issue is that Cancelled 250 and Returned 245 orders are higher than Delivered orders 225. Over 45% of orders are either cancelled or returned. The company should investigate product quality, delivery times, or the return policy to reduce losses.
